**Subject:** Michigan Bill SB 438

I would like to have my voice on the record as being greatly opposed to this bill.

Net metering as it currently stands, allows Michigan homeowners to transition to a clean power source under a reasonable cost structure. It also has been a catalyst for clean jobs in manufacturing, design, and installation. It is my conviction that dismantling the existing structure will kill the motivation for homeowners to consider solar, and subsequently eliminate these clean jobs.

It is my sincere hope that as a state we will be progressive when it comes to solar power, not regressive. And I hope that the voice of the average homeowner and those of us who have invested in our clean power systems will override the voice of the large utilities for whom this bill benefits.
